951 Brook Ave., New York 51, N. Y.

Manufactured by:

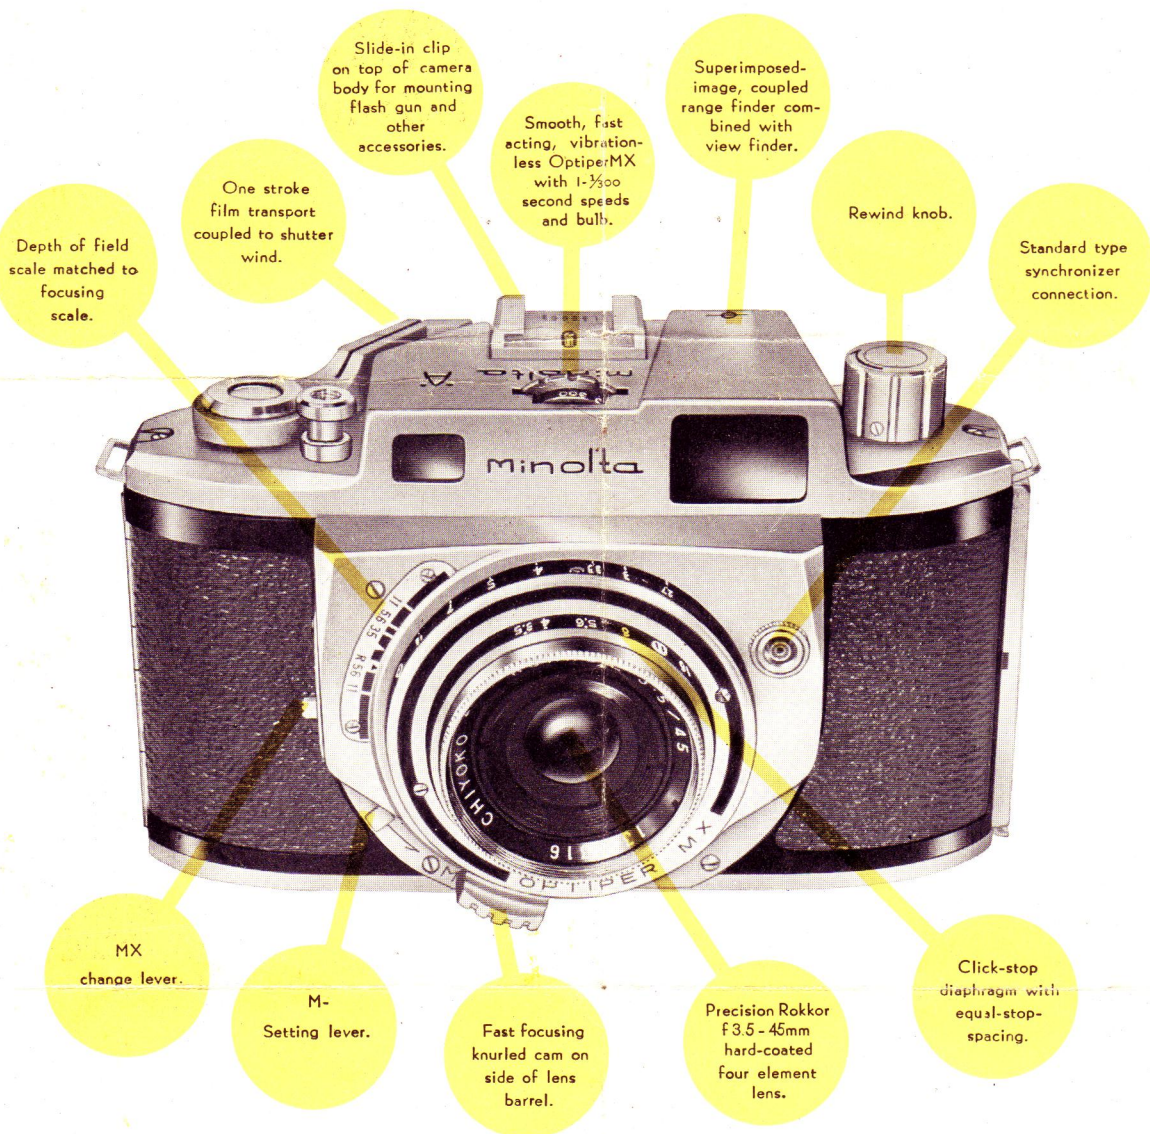

CHIYODA KOGAKU SEIKO K. K.

Printed in Japan

The New MINOLTA 'A' is a precision, professional quality 35mm camera in every respect. Born in one of the oldest camera and optical works in Japan, devoted exclusively to the production of cameras and optical products, it is one of a complete line of cameras that represent the finest precision workmanship in the camera art. Ruggedly built to withstand years of hard usage, it is housed in a lightweight precision die-cast aluminum alloy body. Designed for fast operation, the single thumb-stroke film advance lever cocks the shutter in the same operation, which prevents double exposures. A knurled, index-finger-actuated cam and helical focusing threads provide fast action focusing. The coupled, superimposed-image range finder provides a brilliant square shaped image in the center of the view finder. This eliminates the necessity of moving the eye from

one eyepiece to another after focusing for framing the field of view. The fast Rokkor F3.5-45mm four element lens has all glass-air surfaces hard-coated and is equipped with a click-stop diaphragm. Diaphragm-stop numbers are equally spaced on the dial making proportional stops easy to select. The smooth acting Optiper MX shutter provides fast acting vibrationless operation at speeds from 1. to 1/500 second and bulb. It is synchronized for both flash bulbs and strobe-light at all speeds and has a standard type connection so that any flash gun may be used. A standard slide-in accessory clip is provided on the top of the camera for mounting a flash gun or other accessories. A hinged back provides easy loading and an automatic film counter shows the number of frames exposed. Takes standard 35mm film cartridges. Price only \$49.95 less case and accessories.

- Auto-up lens with case 9.90
- Self-timer with case 3.40

(Prices subject to change without notice)

Minolta Junior B. C. Flash

An exceptionally small B. C. (battery capacitor) flash unit. The flash works equally well with midget or larger bulbs: may be used by sliding it into the accessories shoe on the side of the camera or held by left hand in off-the-camera position. The reflector has a built-in ejector and test lamp, yet it folds into a compact fan and fits into the convenient vinyl carrying case with a loop to accommodate the neckstrap. \$ 8.50
