Point the Autowide

1

To automatically SET EXPOSURE...

Wide Vision Lens sees more area! Full 64°.

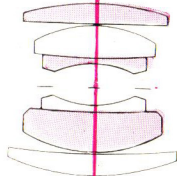

"Ordinary" camera lens cuts off part of the picture (usually covers only 46°).

Because this fabulous Wide Vision Lens has been painstakingly hand crafted with rare earth, you gain extreme depth of field-enabling you to take "sharp," detailed pictures without wasting a lot of time focusing. In addition, it heightens the illusion of a third dimension, and there's much less chance of background colors getting fuzzy as they sometimes do with "ordinary" lenses.

35mm lens takes in more of what you actually see - a full 64°.

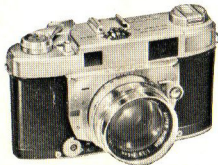

Rare earth Rokkor 6-element, f: 2.8,

WORLD'S MOST ACCURATE COLOR LENS...

Other world-famous MINOLTA CAMERAS featuring the unsurpassed
