Vivitar

PHOTOGRAPHERS MADE US #1!

THE 3500 FLASH SYSTEM.

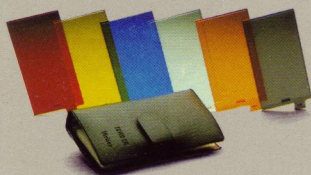

Creative accessories grow with you. Build your own complete light system.

Vivitar flash accessories give you versatility, reliability, and can set you free to be an extraordinary, creative photographer. You'll achieve effects you never dreamed you could.

Choose from these accessories and expand your 3500 EFU to its full systems capacity.

The FK-2 Flash Filter Kit.

Transform ordinary pictures into visual color treats with a variety of color filters.

PGB-2 Quick Release Pistol Grip.

A pistol grip system that features a quick release to separate your flash unit for use off camera. The 3500 maintains your fully dedicated exposure control with the addition of the Dedicated

Sensor Cord DSC-1 and you have the flexibility to aim as you please.

HVP-1, High Voltage

Battery Pack. A high-voltage battery pack carried at your side or over-the-shoulder.

This powerhouse uses a 510-volt battery to produce full power flashes and quick recycling.

Complete Vivitar 3500 system accessory guide.

COMPACT. POWERFUL. NEW.

DEDICATED TO YOUR QUEST FOR THE ULTIMATE IN CREATIVE, PERFECTLY EXPOSED IMAGES.

The Vivitar

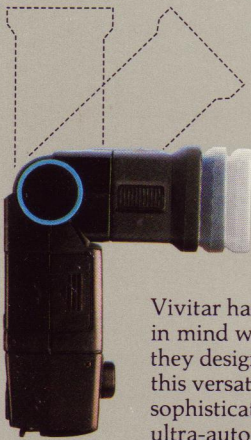

3500

Dedicated Flash System.

THE VIVITAR 3500 LIGHT SYSTEM. YOU DO THE CREATING. IT DOES THE WORK. AUTOMATICALLY!

DEDICATED TO TOTAL EASE

Vivitar had you in mind when they designed this versatile, sophisticated, ultra-automatic

flash system. No more limitations. No more distracting computations... while that extraordinary shot gets away.

The Vivitar 3500 Flash System frees you to explore the full creative potential of photography... offers more choice and flexibility through built-in and accessory features... and opens a new world of image possibilities.

It's what you would expect from Vivitar--the leader in electronic flash.

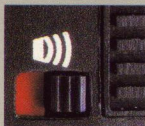

Dedicated Especially to Your Fine 35mm SLR Camera

Model 3500 is designed to interface electronically with most leading 35mm SLR cameras, Olympus, Canon, Nikon, Minolta, Pentax, and more. This "picture perfect" connection results in automatic shutter selection and extra information right in the viewfinder, giving you additional assurance that the shot you're taking will be lighted exactly the way you intended. If the light is not right, it will let you know it's not right.

A Vivitar First: Beep, Beep... Beeeep!

With or without a "dedicated" camera, the 3500 gives you a new option. It signals you that everything is going right. It both "shows and tells" you that the Flash 3500 is ready to fire:

An Audible Signal... Beep.
A LED Flash Ready Light.

After you've taken a properly exposed shot, if you chose to, you get two more significant signals:

The Audible Signal... long Beeeep. A LED Flash Sufficient Light Indicator.

You will know--after taking every shot--that the image is properly exposed. Whether bouncing, zooming, using filters, slaves, off camera, or pistol grip. If that isn't automatic, what is?

Dedicated to Power... Of Course!

You'll want to use this system in a variety of situations... indoors and out. At home or far away. That's why the 3500 is equipped to properly light subjects as far as 47 feet, as close as 2 feet. That's why there are accessory power sources to increase versatility of use. That's why you'll want to keep the Model 3500 with you all the time.

DEDICATED TO YOUR CREATIVITY

As your photographic talents grow, the Model 3500 System grows with you. It's truly Full System photography at its best.

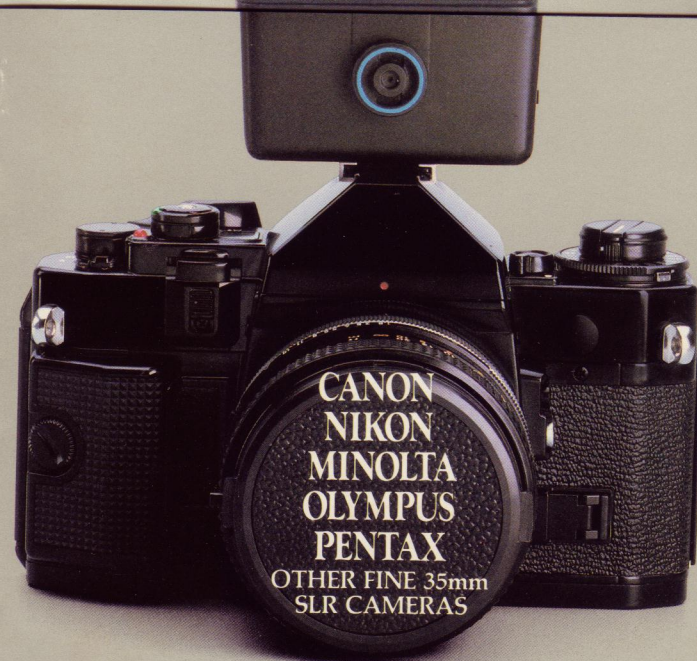

The 3500 itself has many built-in professional features:

- Eyelight Panel™ for 28mm lens.
- -7° angle for parallax correction.
- Adjustable bounce head.
- 3 sensor ranges control the exact amount of light up to 47 ft.

• Red LED: "Ready!" Green LED: "Sufficient light!"

• Audible beep: "Ready!" Audible beeeep: "Sufficient light!"

- Audible on/off switch silences the signal when quiet is called for.
- Pre-shot test button.
- Optional power sources.

THE VIVITAR 3500 LIGHT SYSTEM. YOU DO THE CREATING. IT DOES THE WORK. AUTOMATICALLY!

DEDICATED TO TOTAL EASE

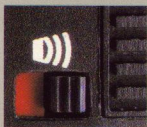

Vivitar had you in mind when they designed this versatile, sophisticated, ultra-automatic

flash system. No more limitations. No more distracting computations... while that extraordinary shot gets away

A Vivitar First: Beep, Beep... Beeeep!

With or without a "dedicated" camera, the 3500 gives you a new option. It signals you that everything is going right. It both "shows and tells" you that the Flash 3500 is ready to fire:

An Audible Signal... Beep.
A LED Flash Ready Light.

After you've taken a properly exposed shot, if you chose to, you get two more significant signals:

The Audible Signal... long Beeeep. A LED Flash Sufficient Light Indicator.

CANON

Just a few easy steps and you can take foolproof perfect flash pictures with your Canon camera and the new Vivitar 3500.

• See and hear that your Canon is set and flash is ready.

• See and hear when you have taken a properly exposed picture.

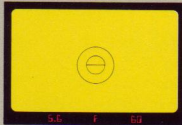

To use the 3500, first select the automode, and set ASA of film on the base (module) of the flash.

• A-1

To get ready: Just set camera to any "AE" mode. Set camera lens to "A." Flash shutter speed is set automatically.

Then Shoot and Shoot and Shoot!

Just watch for the flash ready indicator "F" in the viewfinder (or listen for the "Beep"). Focus and shoot. The "Beeeep" tells you your exposure was terrific!

• AE-1

To get ready: Just set camera lens to "A." Flash shutter speed is set

automatically (except if shutter speed dial is in "B" position).

Then Shoot and Shoot and Shoot!

Just watch for needle in viewfinder to indicate "ready" by moving to automode F-stop selected (or listen for the "Beep"). Focus and shoot. The "Beeeep" tells you your exposure was terrific!

• AV-1

To get ready: Just set camera to "A" position. Set camera lens to "A" position. Shutter speed is set automatically.

Then Shoot and Shoot and Shoot!

Just watch for needle in viewfinder to indicate "ready" by moving to correct flash shutter speed (1/60) (or listen for the "Beep"). Focus and shoot. The "Beeeep" tells you your exposure was terrific!

• AT-1

To get ready: Just match aperture on camera to automode of flash.

DEDICATED TO YOUR CREATIVITY

As your photographic talents grow, the Model 3500 System grows with you. It's truly Full System photography at its best.

The 3500 itself has many built-in professional features:

- Eyelight Panel™ for 28mm lens.
- -7° angle for parallax correction.
- Adjustable bounce head.
- 3 sensor ranges control the exact amount of light up to 47 ft.

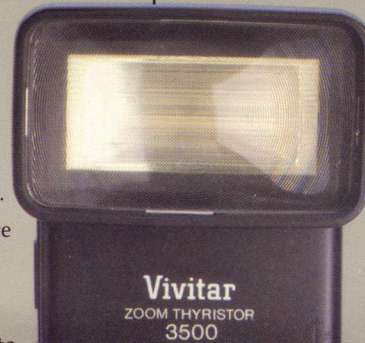

• Red LED: "Ready!" Green LED: "Sufficient light!"

• Audible beep: "Ready!" Audible beeeep: "Sufficient light!"

• Audible on/off switch silences the signal when quiet is called for.

• Pre-shot test button.

• Optional power sources.

Shutter speed is set automatically (except if shutter speed dial is on "B" position).

Then Shoot and Shoot and Shoot! Just listen for the "Beep" Focus and shoot. The "Beeeep" tells you your exposure was terrific!

NIKON

Just a few easy steps and you can take foolproof, perfect flash pictures with your Nikon camera and the new Vivitar 3500.

• See and hear that your Nikon is set and flash is ready.

• See and hear when you have taken a properly exposed picture.

To use the 3500, first select the automode you desire on the 3500, then follow these easy steps:

• FE

To get ready: Set camera to "auto" and match camera aperture to automode on flash. Flash shutter speed is set automatically.

Then Shoot and Shoot and Shoot! Just watch for the "flash ready

light" in viewfinder (or listen for the "Beep"). Focus and shoot. "Beeeep" tells you your exposure was terrific!

• EM

To get ready: Set flash automode to "EM" position, set camera to

"auto." Flash shutter speed is set automatically. If you incorrectly set camera aperture, a rapid "Beep, Beep, Beep" will tell you so.

Then Shoot and Shoot and Shoot!

Just watch for the "flash ready light" in viewfinder (or listen for the "Beep").

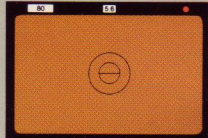

Focus and shoot. "Beeeep" tells you your exposure was terrific!

• F-3

To get ready: Set camera to "auto." Match camera aperture to automode on flash. Shutter speed is set automatically.

Then Shoot and Shoot and Shoot!

Just watch for the "flash ready light" in viewfinder (or listen for the "Beep"). Focus and shoot. "Beeeep" tells you your exposure was terrific!
