Vivitar

PHOTOGRAPHERS MADE US #1!

THE 3500 FLASH SYSTEM.

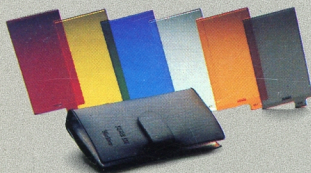

Creative accessories grow with you. Build your own complete light system.

Vivitar flash accessories give you versatility, reliability, and can set you free to be an extraordinary, creative photographer. You'll achieve effects you never dreamed you could.

Choose from these accessories and expand your 3500 EFU to its full systems capacity.

The FK-2 Flash Filter Kit.

Transform ordinary pictures into visual color treats with a variety of color filters.

PGB-2 Quick Release Pistol Grip.

A pistol grip system that features a quick release to separate your flash unit for use off camera. The 3500 maintains your fully dedicated exposure control with

the addition of the dedicated sensor cord DSC-1 and you have the flexibility to aim as you please.

HVP-1, High Voltage Battery Pack. A high-voltage battery pack carried at your side or over-the-shoulder. This powerhouse uses a 510-volt battery to produce full power flashes and quick recycling.

Complete Vivitar 3500 system accessory guide.

Q.

WHAT GOES BEEP, BEEP, AND TAKES THE FEAR OUT OF FLASH PHOTOGRAPHY?

A.

The Vivitar

3500

Dedicated Flash System.

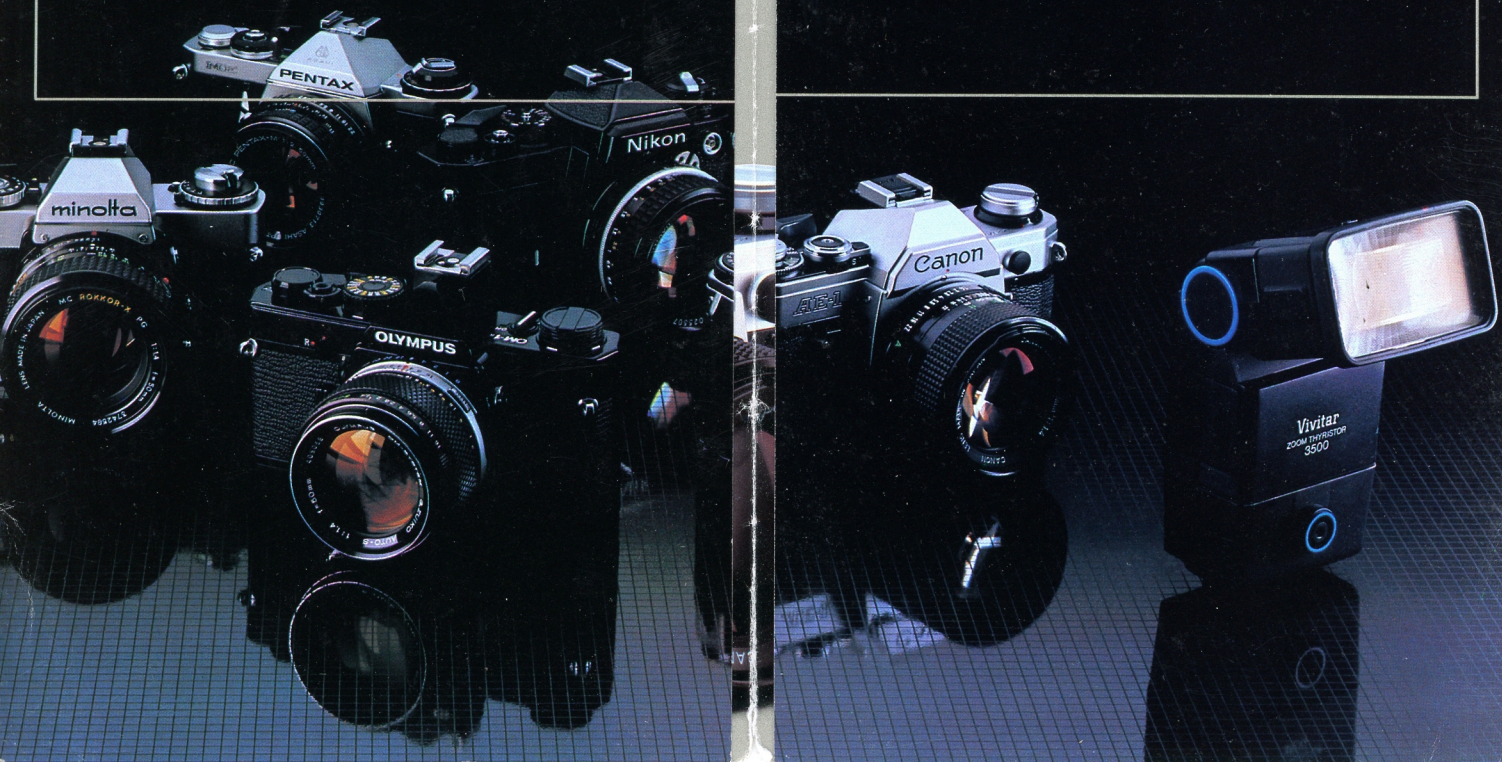

VIVITAR IS DEDICATED TO YOUR 35MM SLR CAMERA.

You know fear. It's the feeling you get when you've loaded your camera, attached your flash unit and then tried to divide 6.7 feet by an index number. Calculus? Trigonometry? What is this? Well now, that's all behind you.

Vivitar had you in mind when they designed this truly dedicated, revolutionary flash system. It does all your figuring for you. It tells you when it's ready. It tells you when it's happy. Flash away. The 3500 is customized and synchronized and in love with your 35mm SLR camera.

Electronics mesh together and work together to assure you of perfect results. With the 3500 you're getting all the advantages you originally sought when you bought an automatic SLR. And more. Vivitar expands your capacity for basic shots and creative photography with features no one else offers.

It's the "systems" approach that made Vivitar the leader in flash and accessories. It's quality. It's value. And, now, with the 3500, it's dedicated.

THE PICTURE PERFECT CONNECTION. Y

SET IT AND FORGET IT.

It's easy.

Functioning as an integral part of your dedicated SLR system camera, the 3500 automatically sets your exposure speed on most cameras. It activates and programs your viewfinder information. Tells you when it's ready with its famous and exclusive "beep, beep" feature (or with its "ready" light if you don't want to wake up the baby).

It's perfect exposures every time.

It tells you after you've taken your picture whether or not you had sufficient light on your subject. Like this...

Flash is ready: **BEEP**

After the shot: sufficient light and

proper exposure: **BEEEEP**

Flash is ready to fire again: **BEEP.**

It's powerful.

And that means flexibility. Control. You're assured of automatically correct exposure as far away as 47 ft. or as close as 2 ft. Three automatic sensor ranges give you a choice of F-stop and, thus, your choice on depth of field. Your chance to be creative. Automatically.

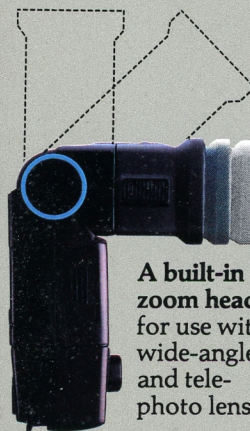

VIVITAR 3500 FEATURES.

Design innovations that make it easy to be a flash expert.

Test button to fire flash to test sufficient light independent of shutter.

Bounce head adjusts to variable angles for bounce flash photography—professional style.

Red LED signals when flash is ready to fire and **green LED** lights after the flash if picture had sufficient light for proper exposure.

Auto-winder mode permits extra fast recycling for rapid shots with automatic winder.*

Wide-angle Eyclight Panel™ for 28mm lens and/or light diffusion to add sparkle to your subjects' eyes.

*Except Canon.

YOU. YOUR CAMERA. THE VIVITAR 3500.

THE RESULTS SPEAK FOR THEMSELVES.

3 sensor ranges assuring correct exposure automatically and give you control on depth of field.

-7° angle corrects parallax for close shots. Perfect for macro photography.

Audible signal beeps when flash is ready to fire and beeps if picture has sufficient light for proper exposure.

Audible on/off switch silences the signal.

Sensor automatically controls the amount of light for correct exposure, up to 47 feet away.

Thyristor™ circuitry for efficient energy use, long battery life and fast recycle time. A Vivitar innovation.

Vivitar 3500 Dedicated Flash System is designed specifically to interface with the electronics and visual displays of all the leading Dedicated SLR cameras. And it's from Vivitar. The leader in "systems" photography and precision products.

No more uncertainty. No more disappointments.

The 3500 is convenient and simple to use. Time and time again your results will be perfect with shots like this.

The 3500 puts only as much light on your subject as required. Automatically. Direct or in soft lighted bounce. Perfect. Or, step back. Adjust the zoom head. The 3500 will reach out to get the results you're after.

The 3500 will help you get the most from the features and design of your camera. If you have a motor drive or autowinder

you can be creative. With perfect results.

The Vivitar 3500 flash system was specifically designed for use with the leading manufacturers of dedicated SLR cameras.
